

Visitation Guidelines

ATTENTION ALL VISITORS:

To keep our patients, visitors, staff and community safe, we will be taking precautions to help limit the spread of flu. Hospital visitation during this influenza season will be altered to decrease the risk of spreading H1N1 (swine flu) infection.

Thank you for your assistance in keeping our patients and visitors safe.

- The number of visitors allowed in the hospital will be limited to two per patient.

2 visitors only

- Visitors 18 years of age and younger should not visit the hospital including lobbies, the cafeteria and other waiting areas.
- Pregnant women and people with chronic illness, particularly respiratory conditions are discouraged from visiting patients.

- DO NOT visit patients if:

- You are feeling sick with flu-like symptoms including cough, sore throat, fever, nasal congestion, muscle aches, vomiting or diarrhea.
- You have recently been exposed to anyone with flu like symptoms or have recently been diagnosed with influenza.

- Every visitor entering or exiting a patient's room must clean hands with soap and water or use an alcohol-based hand sanitizer.
- Masks, hand sanitizers and waste containers are available at entry and registration areas for your use. We ask that you please use these infection prevention resources to help keep our patients, visitors, and staff safe.

- Public reading materials have been removed from our public waiting areas in an effort to decrease the transmission of influenza.

Thank you for your cooperation!
